Appendix

GUIDELINES FOR THE PREPARATION OF A PROJECT REPORT

1.1 INTRODUCTION TO PROJECT REPORT

A project report plays a significant role in the evaluation process of COA Course. It serves as a comprehensive documentation of the project undertaken by the student. The report provides insights into the project's objectives, methodologies, findings, and conclusions. It highlights the student's ability to apply theoretical knowledge to real-world scenarios and showcases their analytical and problem-solving skills.

The report is examined by Faculty responsible for grading and evaluation. The Faculty evaluates the content, organization, clarity, and overall quality of the report. During the scrutiny process, the Faculty considers various aspects, including the alignment of the project with the stated objectives, the methodology used, the accuracy and completeness of the data, the analysis and interpretation of results, and the effectiveness of the conclusions and recommendations. The Faulty also looks for proper citation and acknowledgement of sources used in the project.

Here in this note, we present a format with appropriate guidelines on writing a report on the project. It is therefore expected that all the reports submitted by the students must conform to the suggested format and structure.

1.2 PAGE SET-UP & NUMBER OF COPIES

The size of the report should be such that it is easy to use, handle, and preserve the report. Also, the writing should be such that a reader is able to read it with ease.

For this purpose, please note the following:

(a) *Size* 9” x 11”, which is called the quarto size and is usually known as the “thesis size”(A4).

(b) *Writing of the report*: The report should be written or typed in double space on one side of the sheet and the pages should be numbered serially.

(c) *Margin*: About 1” on all the four sides of the sheet.

(d) *No. of copies*: Two hardbound bound copies must be submitted.

1.3 CONTENTS OF PROJECT REPORT

Apart from the top cover, the report should contain the following:

(a) Cover page

(b) Acknowledgements

©SRM UNIVERSITY – AP, ANDRA PRADESH

(c) Abstract Sheet

(d) Table of Contents

(e) Introduction

(f) Main Text

(g) Outcomes

(h) Conclusions and/or Recommendations

(i) Appendices (if necessary)

(j) References

We now elaborate these items in some detail.

(a) ***Cover page***

These are the first pages of the report. It should contain the title of the report, name(s) of the author(s), name of the organization and the name of the institute. The format of these pages should adhere to the specifications. Title should not exceed 100 characters including blanks, etc.

(d) ***Acknowledgements***

There are many people who may have helped a student during the work carried out by him/her in his/her project. It is one's duty to acknowledge it and thank them for their help. Customarily, thanks are due to the following in the order given below:

(i) Head of the organization (Vice Chancellor and Dean)

(ii) Industry Mentor in charge of the project

(iii) Faculty of the University

(iv) Any other persons (from the organization and/or outside the organization, etc)

(e) ***Abstract***

This is the third page of the report. The abstract is a crucial component of a project report as it provides a concise summary of the entire project. A reader, on going through it, should be able to know what the project is, who wrote it and under whose supervision, what has been done (in brief), how it has been done, what the main results are, etc.

The abstract should be written in a clear and concise manner, using language that is understandable to a wide range of readers. It should be self-contained and provide sufficient information to give readers a solid understanding of the project's scope, methodology, and findings. The abstract serves as a crucial reference point for readers to determine whether they want to delve deeper into the full project report. It is important to note that while the abstract provides a condensed overview, it should not include

©SRM UNIVERSITY – AP, ANDRA PRADESH

excessive detail or technical jargon. Instead, it should focus on conveying the main points of the project in a concise and engaging manner. Only in unusual cases should it contain more than 200 words. The nomenclatures used should be meaningful, that is, only standard terminology should be used.

(f) ***Table of Contents***

The table of contents in a project report follows a similar structure to that of a book. It provides a systematic outline of the main divisions and subdivisions of the report, along with the corresponding page numbers.

For example:

CONTENTS	Page no.
Introduction	5
1.1 …	5
1.2 …	6

(g) Background and description of the problem

In this the problem is introduced. So, the introduction should contain the purpose of the report, sufficient background material, including literature survey to present the reader a clear picture of the work. An outline of the work should also form a part of the introduction.

The purpose of writing the introduction is to arouse the curiosity of the reader in the report. Therefore, a proper and interesting introduction should include a brief history of the topic coupled with the statement of the immediate problem, the reasons for interest in it and a discussion of the method of attack or treatment. Generally, an introduction is not more than one page. Therefore, a proper and interesting introduction should include a brief history of the topic coupled with the statement of the immediate problem, the reasons for interest in it and a discussion of the method of attack or treatment.

(h) Main Text

In this the work, the method of treatment and the results are presented. It may run into ***one or more than one chapters/section under different headings and sub-headings***.

It should ideally contain the following:

- Assumptions made,
- Experimental work/data collection,
- The survey done, or algorithm presented,
- A description of activities or programs or case studies outlined,

©SRM UNIVERSITY – AP, ANDRA PRADESH

- The results obtained/illustrations,
- The discussion and interpretations, etc.

Significant discrepancies in results should be called to the reader's attention, even when it is admitted that no reasonable explanation can be offered.

(i) Outcomes

The principal outcomes as identified from the results of your analysis are to be highlighted in this section preferably in bulleted form.

(j) Conclusions and/or Recommendations (if any)

The conclusions and recommendations are based on the discussions and interpretations of the results obtained. It would be helpful to the reader if other possibilities pertaining to the stated conclusions and recommendations are discussed.

(n) Appendices (if necessary)

The contents of an appendix are essentially those that support or elaborate the matter in the main text. divert the attention of the reader from the main problem, is generally put into the Appendix. We give below some broad items, which normally form part of the appendix. These are:

- **Calculation Sheets/ Lengthy derivations of mathematical formulae (if that is not the project itself)./ Supplementary details of instructions/ Flow charts/ Computer programs/ Questionnaires/ Large maps/ Nomenclature, etc.**

NOTE for CS students: If the project itself is to make a computer program of some problem, then flow charts and the computer program have to be in the main body. One is expected to decide according to one's own need.

(o) References

All the references should be given in the section called *References.* We cite below two examples of writing references.

Suppose we have to refer to a paper entitled *An Integral Equation Satisfied by the Square of Webers' Parabolic Cylindrical Function, whose* author is S.C. Mitra and which appeared in the Journal of the London Mathematical Society whose volume is 11, the year of publication 1936, and the article is published on pages 252 to 256. We shall write it as follows:

Mitra, S. C., "An Integral Equation Satisfied by the Square of Webers' Parabolic Cylindrical Function" *Jour. Lond. Math. Soc.*, 11 (1936), pp. 252-256.

Suppose we have to refer to a book called *An Introduction to Linear Algebra* by Dr. V. Krishnamurty and others which was published by Affiliated East West Press Pvt. Ltd., New Delhi in the year 1976. This we shall write as:

Krishnamurty, V. & others, *An Introduction to Linear Algebra* Ist edition, Affiliated East West Press, New Delhi (1976).
